

# HTML & CSS Journey Cheatsheet (Days 1–15)

## HTML Structure

, html, head, body, header, nav, main, section, footer. Semantic tags improve structure.

## Box Model

content → padding → border → margin. box-sizing: border-box includes padding+border in width.

## Sizing

px=fixed, %=relative parent, rem=root font, vh/vw=viewport.

## Display

block, inline, inline-block, flex, grid.

## Flexbox

display: flex; flex-direction, justify-content, align-items, gap, flex-wrap, flex-grow, flex-shrink.

## Position

static, relative, absolute, fixed, sticky. z-index controls stacking.

## Transforms & Transition

transform: translate/scale/rotate; transition animates changes.

## Grid

display: grid; grid-template-columns/rows; repeat(); fr; minmax(); gap; grid-column; grid-row; auto-fit/auto-fill.

## Dashboard Layout

Outer grid: sidebar + content. Inner grid for header/main. Build layouts with nested grids.
